The House of Yegin, of Küçükkuyu, in the GÜLİNO (10) Pedigree of the Kureyşan Ocak

Genealogical Evidence, the 1925 Population Re-registration, Heraldic Registration, and Family Memory

Doğukan Yegin

Founder and Head of the House of Yegin, of Küçükkuyu | 4 November 2026 | English research edition

Independent genealogical and heraldic research paper prepared for Academia.edu; not represented as a peer-reviewed journal article.

Doğukan Yegin
Founder and Head

Registered armorial achievement
The Armorial Register No. 0773

Abstract

This study examines the House of Yegin, of Küçükkuyu, in the GÜLİNO (10) pedigree published by Kureşanlı Seyyid Kekil. It compares the printed genealogical image with Turkish civil ancestry records dated 9 October 2026, the text of an archival response describing a fire-related population re-registration in 1925, and family testimony concerning Hasan and İbrahim Yegin. The documentary discussion is integrated with the separate, contemporary heraldic record of Doğukan Yegin of the House of Yegin, of Küçükkuyu: The Armorial Register, entry No. 0773 (Vol. 5), registered on 31 December 2025. The article reproduces the genealogical source photograph, selected civil-registry row images, the author's portrait, the recorded coat of arms, the armorial certificate, and an illustrated register entry. It explicitly distinguishes a private armorial registration from an armorial grant and from pending institutional correspondence with the Royal House of Ghassan, the Cronista de Armas de Castilla y León, and Registro Araldico Italiano. The combined sources provide identifiable evidence relevant to the family's position in the Kureyşan genealogical tradition while preserving the distinct documentary roles and source-specific generational orders.

Keywords: House of Yegin, of Küçükkuyu; Kureyşan Ocak; GÜLİNO (10); Seyyid Gülin; family genealogy; heraldic registration; The Armorial Register; Nazımiye; family memory.

1. Introduction

The evidentiary record of a family rarely resides in a single type of source. Printed pedigrees transmit named family branches and historical traditions; population registers record relationships within the scope of an administrative system; and oral testimony preserves kinship and migration narratives not always captured in official documents. This study examines the House of Yegin's Nazımiye–Çevrecik roots through an explicit comparison of these source types.

The research began with a photograph of the GÜLİNO (10) chart attributed to Kureşanlı Seyyid Kekil. Among the names printed on the chart are Hasan Yeğin, İbrahim Yeğin, and Cemal. The ancestry extract in the author's possession independently names Hasan Yegin as the father of Cemal Yegin and places Doğukan Yegin in the next recorded generation. The research question is not whether every source says exactly the same thing, but how the evidence can be placed alongside one another without altering its contents.

2. Materials, provenance, and method

Five source classes were used: (A) the author-supplied photograph of a printed GÜLİNO (10) pedigree; (B) a four-page Alt-Üst Soy Bilgisi Sorgulama ancestry extract dated 9 October 2026, produced through the Turkish population-registration system; (C) the complete text of a reply received from an archival authority concerning the 1925 local population recording; (D) the author's account of oral testimony provided by his elder brother; and (E) published historical research on the Kureyşan Ocak and its broader context (Taş, 2018, 2019, 2022; Kömürcü, 2026).

The method is a source-by-source comparison of names, relationships, dates, place-names, and the documentary conditions under which each record was created. The printed chart was reviewed through supplied photographs; the complete physical book and the records originally used to compile its historical pedigree were not independently examined for this edition. The archival response is available as a transcription furnished by the applicant; its signed or stamped image and official file number were not included in the materials reviewed. Neither category has been silently substituted for the other.

The illustrated edition reproduces the original printed chart excerpt and selected rows of the civil document as images. For the public version, unrelated family rows and household/register reference-number columns have been excluded. These are identified as photographic excerpts, not complete copies of the underlying government certificate. No identification numbers or private account details are published.

Table 1. Source inventory

Source	Material reviewed	Evidentiary role
A | Printed pedigree	GÜLİNO (10) photographed chart	Historical branch, printed names and chart links
B | Civil extract	9 Oct 2026 ancestry record	Registered recent paternal and maternal relationships
C | Archive correspondence	Text supplied by the applicant	1925 re-registration and the archive inventory's limits
D | Family testimony	Elder brother's account	Hasan–İbrahim sibling relationship and Germany narrative
E | Research literature	Taş; Kömürcü	Kureyşan historical and sociocultural context

3. The Kureyşan Ocak in historical context

The Kureyşan Ocak occupies an important place in Alevi–Kızılbaş religious and social traditions associated with the Dersim region and with other localities in eastern Anatolia. Taş (2018) discusses the purported historical connection between the Kureyşan lineage and a sixteenth-century Kureyş community through archival and oral sources. A further study by Taş (2019) explores questions surrounding Seyyid Mahmud-ı Kebir

(Kureyş) and related historical figures. Kömürcü (2026) examines the ocak's religious, historical, and social roles, with attention to Erzincan.

In this setting, the terms sayyid and ocakzade may express genealogical affiliation and membership within a historical religious-cultural community. Such descriptions should not be confused with a modern state-conferred peerage, nor do they automatically appoint every family member to an office of pir or mürşid. In this article, lineage terminology is used to describe the tradition represented in the cited pedigree and its place in family history.

4. What the printed GÜLİNO (10) pedigree shows

Kureşanlı Seyyid Kekil's volume is described in a Cologne bookseller catalogue as a Turkish-language publication from 2000, with substantial supplementary genealogical material. The photographed GÜLİNO (10) diagram opens with "Seyyid Kureş (Seyyid Şeyh Mahmud)" and "Seyyid Gülin", followed by Temür, Sadık, and Bertal. In the branch labelled Mustafa, the names Mahmud, Temür, and Hüseyin lead to a sibling group that includes İbrahim Yeğin, Sekina, and Hasan Yeğin. The chart places Kamil, Müslüm, Kazım, and Cemal beneath Hasan Yeğin. It also places Hüseyin, Hasan, Ali, Musa, and Cemal under İbrahim Yeğin (Kekil, 2000; see Figures 1–2).

The larger chart contains other lines, including one identified as Seyyid Avas. Those branches are shown in the printed source, but they have not been transferred into the Mustafa–Yeğin line. Distinguishing adjacent branches is essential when using a published pedigree as historical evidence. The chart records the lineage claimed in that publication; it is not itself a newly issued official Turkish population certificate.

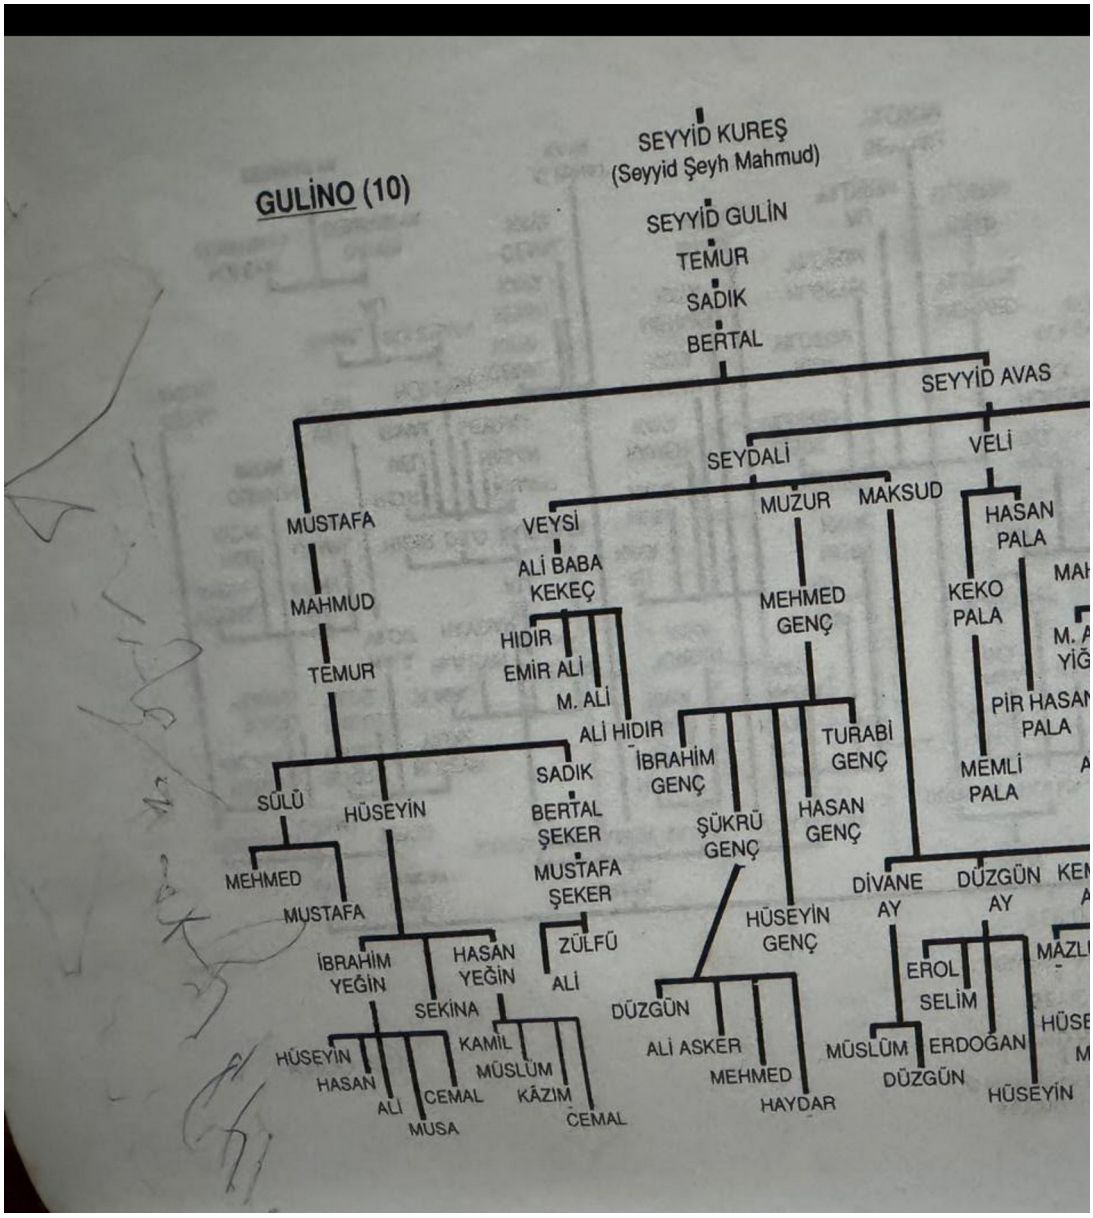

Figure 1. Photograph of the original printed GÜLİNO (10) genealogy; rotated and cropped for legibility. Source: photograph supplied by Doğukan Yegin, from Kekil (2000).

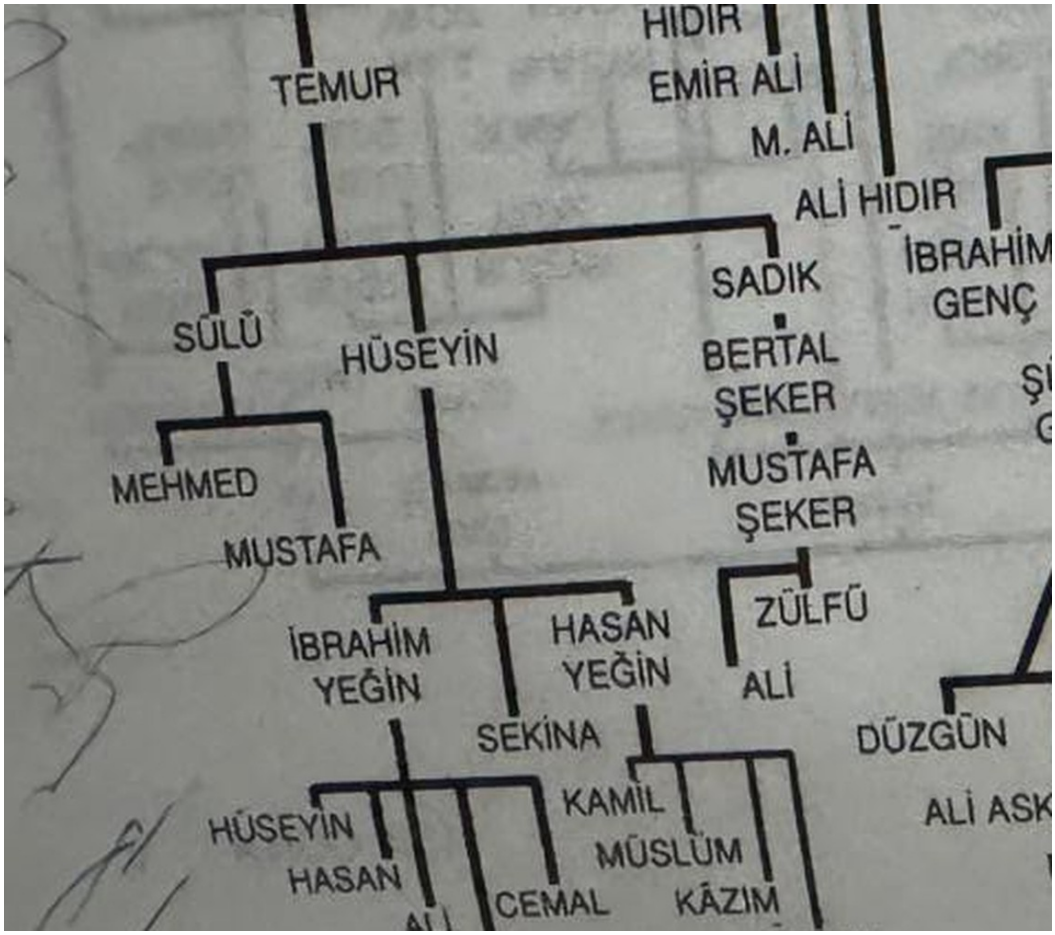

Figure 2. Close view of the Mustafa–Mahmud–Temür–Hüseyin–İbrahim/Hasan Yeğin branch in the printed chart. This is a photographic crop, not a reconstructed relationship.

5. The documented paternal line in Turkish civil records

The official ancestry extract dated 9 October 2026 records a direct paternal sequence: Hüseyin (father of Temür), Temür (born 1 July 1884 in Nazımiye; registered with Çevrecik village, parents Hüseyin and Sakine), Hasan Yegin (born 1 July 1928 in Nazımiye; parents Temür and Şehriban), Cemal Yegin (born 14 April 1969; parents Hasan and Besime), and Doğukan Yegin (born 11 May 1994). Temür's spouse is recorded as Şehriban Kuş; Hasan's spouse is recorded as Besime Yegin. The register also identifies Şehriban's family connection to Geriş village (NVİ, 2026).

These entries establish the recent relationships as recorded by the Turkish population administration. The ancestry-query output is described as informational in the document itself and is not, by that description, a substitute for a separately issued certificate required by a particular administrative procedure. Figures 3 and 4 reproduce only relevant rows from the underlying extract, with the unrelated records and household-number and residence columns omitted.

OFFICIAL EXTRACT · RECORD FOR TEMÜR

Turkish Alt-Üst Soy Bilgisi, page 2, row 10 (9 October 2026)

Sıra	C	Yakınlık Derecesi	Adı	Soyadı	Baba Adı	Ana Adı	Doğum Yeri ve Tarihi
10	E	Babasının Babasının Babası	TEMÜR	-	HÜSEYİN	SAKİNE	NAZIMİYE 01/07/1884

Selected original rows; registration and residence columns intentionally excluded.

Figure 3. Selected row for Temür (born 1884) from the civil ancestry extract, p. 2, row 10. The original Turkish headings are preserved in the photographic excerpt.

OFFICIAL EXTRACT · HASAN AND CEMAL YEGIN

Turkish Alt-Üst Soy Bilgisi, page 3, rows 21 and 24 (9 October 2026)

Sıra	C	Yakınlık Derecesi	Adı	Soyadı	Baba Adı	Ana Adı	Doğum Yeri ve Tarihi
21	E	Babasının Babası	HASAN	YEGİN	TEMÜR	ŞEHRİBAN	NAZMİYE 01/07/1928
24	E	Babası	CEMAL	YEGİN	HASAN	BESİME	NAZİMİYE 14/04/1969

Selected original rows; registration and residence columns intentionally excluded.

Figure 4. Selected rows for Hasan Yegin and Cemal Yegin from the civil ancestry extract, p. 3, rows 21 and 24. The displayed rows were excerpted separately from the same page.

6. The 1925 fire and local population re-registration

The archival reply text supplied to the author reports that the family of his great-grandfather Temür was entered in the population register of Çevrecik village, Nazımiye, following a local registration conducted in 1341 (1925) because of a fire. It also states that the pre-registration and older (“atik”) records of the relevant administrative unit do not appear in the archive’s transfer inventory, thereby preventing a further retrospective search using those particular holdings.

The relevant passage, translated into English from the supplied Turkish text, reads: “Following an examination conducted in our archive upon your application, it was established that your great-grandfather Temür and his family were entered in the population register of Çevrecik Village, Nazımiye District, Tunceli, by means of a local population registration conducted in 1341 (1925) because of a fire. However, since the records predating that local registration and the older registers of the relevant administrative unit are not present in our archive transfer inventory, it has not been possible to conduct a retrospective examination of your earlier ancestry. For your information.”

This statement is significant because it specifies an archival discontinuity and documents the reason given for the 1925 re-registration. It is not a statement that the family originated in 1925. Because only the response text—not the original signed image or official case identifier—was furnished for this public research edition, the quotation is explicitly labelled as a supplied transcription.

7. The Hasan–İbrahim sibling relationship in family memory

According to the author’s account of information received from his elder brother in November 2026, Hasan Yegin had a brother named İbrahim. The family also remembers that Hasan obtained an opportunity or right to travel to Germany but gave it to İbrahim, and that İbrahim subsequently went to Germany. This is a family testimony, not an independently inspected emigration permit.

The printed GÜLİNO (10) chart places Hasan Yeğin and İbrahim Yeğin within the same sibling group. That detail corresponds to the family account at the level of identity and kinship role. The reported transfer of the opportunity to go to Germany provides a distinct narrative about the brothers, but the available material does not specify an administrative date or procedure. This study does not treat access to private German residence or employment records as a prerequisite for reporting the family testimony.

8. Comparison, convergences, and differences

The most concrete convergence is between the printed “Hasan Yeğin → Cemal” relation and the official parent–child record identifying Cemal’s father as Hasan. A further connection is between the printed Hasan–

İbrahim sibling group and the elder brother's oral testimony. The archival reply contributes a different kind of evidence: it establishes, in its supplied wording, why older local population entries may not be retrievable in the relevant archive inventory.

The sources do not present every generation in an identical order. The printed chart places a Temür above Hüseyin and then Hasan; the official recent civil sequence is Hüseyin → Temür (1884) → Hasan (1928). The printed Sekina appears as a sibling in the Hüseyin branch, whereas Sakine in the civil extract is recorded as the mother of Temür. These are source-specific placements and must not be conflated or silently edited. Recognizing them preserves the record and makes subsequent study possible without inventing missing intermediates.

Table 2. Source comparison

Topic	Printed pedigree	Civil record / testimony	Finding
Hasan → Cemal	Cemal listed under Hasan Yeğin	Cemal's father recorded as Hasan	Match in names and stated relationship
Hasan / İbrahim	Shown as siblings	Sibling relationship recounted by elder brother	Correspondence with family memory
Temür / Hüseyin	Temür → Hüseyin → Hasan	Hüseyin → Temür → Hasan	Different generation ordering retained
Sekina / Sakine	Sekina in Hüseyin sibling group	Sakine is mother of Temür	Different position and role
1925 registration	Not described by printed chart	Explained in archival reply text	Archival availability context

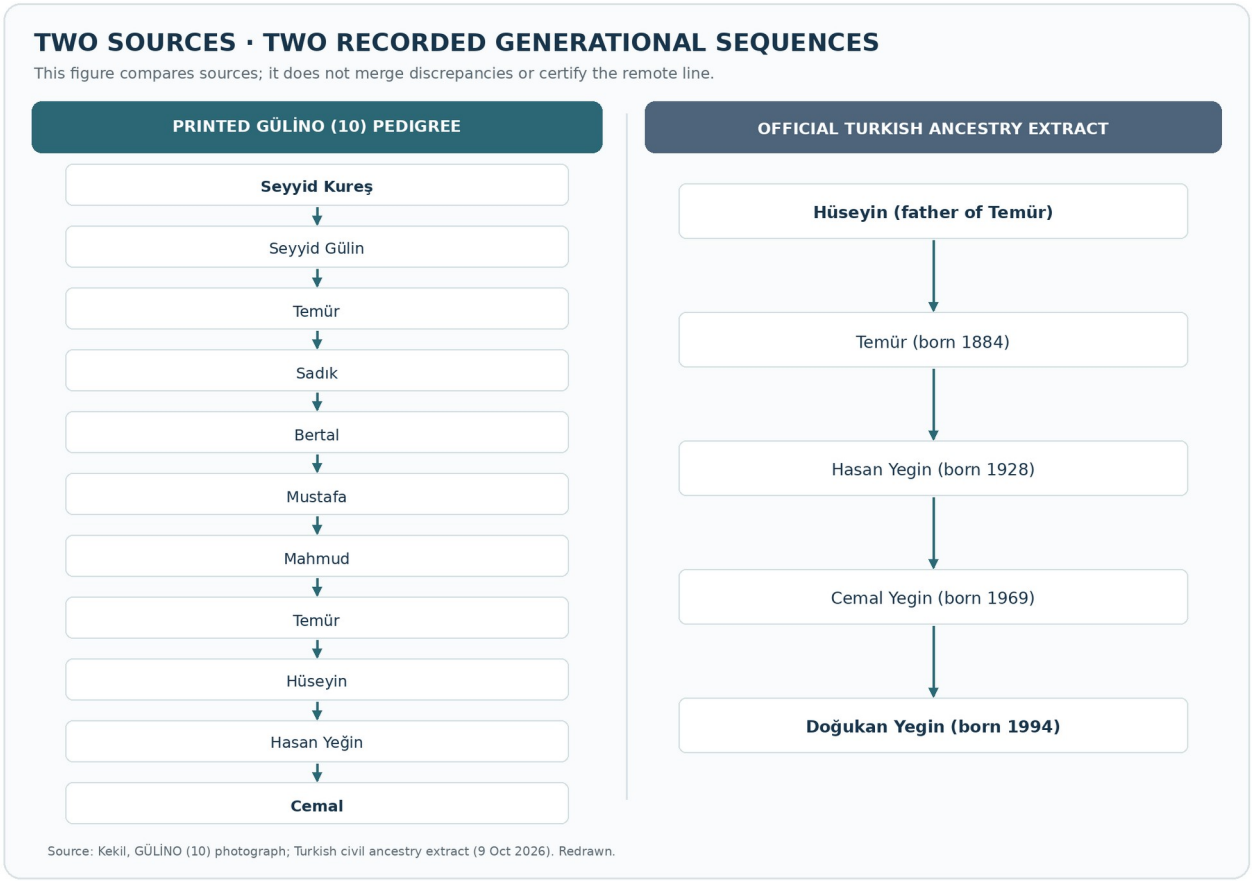

Figure 5. Comparative visualization of the two source-recorded genealogical sequences, rather than a merged or officially certified tree. Original English diagram prepared for this paper.

9. Family identity, sayyid tradition, and heraldic documentation

The printed sequence from Seyyid Kureş through Seyyid Gülin offers a documented basis for describing the House of Yegin's place in the Kureyşan genealogical tradition. In that cultural and historical context, the author identifies with the Kureyşan Ocak and its inherited sayyid/ocakzade lineage tradition. Such a cultural-

genealogical description is distinct from the issuance of a modern sovereign title or independent certification of every distant intermediate generation.

The author's contemporary heraldic project, House of Yegin, concerns the preservation of an armigerous family identity and its historical archive. The existing armorial registration and the older Kureyşan pedigree serve different evidentiary purposes: the former records a modern heraldic act; the latter transmits the earlier line as presented by a published source. Genealogical material may be included in future institutional submissions with provenance clearly identified, without presenting it as royal succession or a claim to a historic throne.

10. The registered heraldic achievement of the House of Yegin, of Küçükkuyu

The name used in the documented heraldic record is "Doğukan Yegin of the House of Yegin, of Küçükkuyu". The family is identified as the House of Yegin, of Küçükkuyu. The Armorial Register certificate states that the arms were registered on 31 December 2025, No. 0773 (Vol. 5). The accompanying illustrated web entry, supplied as a dated screenshot, describes Doğukan Yegin as Founder and Head of the House of Yegin, of Küçükkuyu; it dates the assumption of the arms in Türkiye to 23 December 2025 and credits the design to Doğukan Yegin and the illustration to The Armorial Register Limited.

Arms (as recorded): "Purpure, between three estoiles Argent a cross potent surmounted by a smaller cross potent conjoined thereto and sharing the same stem, Or." Crest (as recorded): "Upon a helm with a wreath Or and Purpure, a demi-lion rampant Or holding between its paws a cross potent surmounted by a smaller cross potent, conjoined thereto and sharing an elongated stem, Gules. Mantled Purpure doubled Or." Motto: "Fortitudine Et Honore."

The record describes an assumed and registered armorial achievement. The Armorial Register is a privately operated armorial registry, not a state company register. This registration is not presented as a governmental grant of arms, a noble title, or a royal grant. It is also distinct from the commercial registration of NorthByte Norway Tec Ltd. This distinction matters in identifying which heraldic acts are completed and which separate processes remain pending.

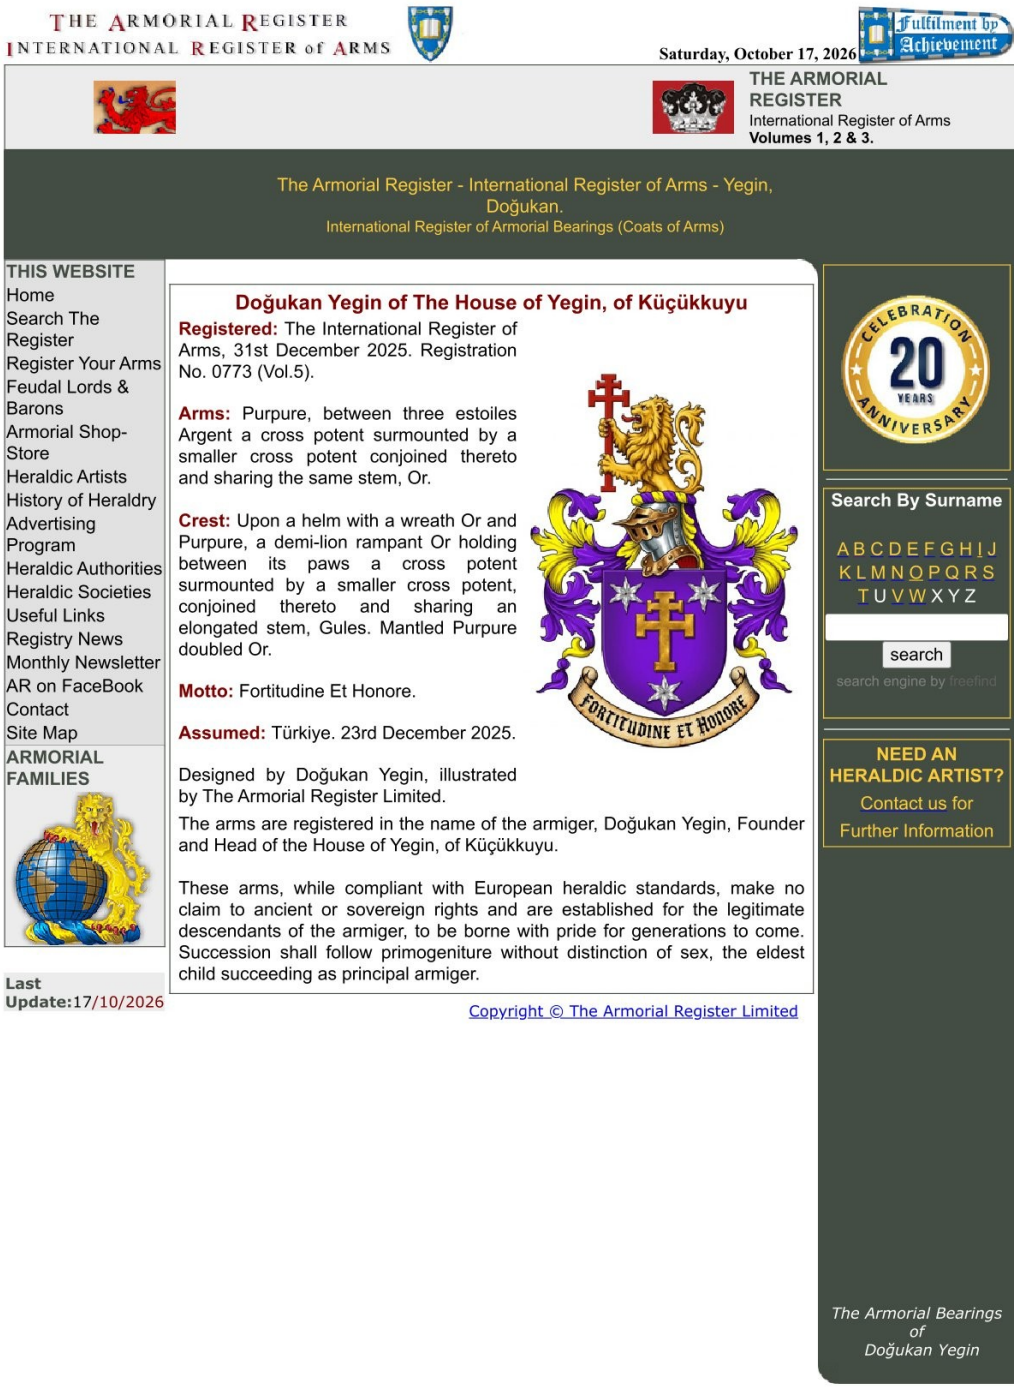

Figure 7. Screenshot of the illustrated armorial register entry, dated 17 October 2026 in the supplied capture. Its text refers to the founder and head of the House of Yegin, of Küçükkuyu.

Figure 8. Emblazoned coat of arms of Doğukan Yegin, registered as No. 0773. Image supplied by the author.

11. Ongoing heraldic correspondence and status of submissions

The Royal House of Ghassan has been in correspondence with the author concerning the blazon and the heraldic identity of the House of Yegin. Supplementary genealogical materials, including the Kureyşan pedigree, were prepared and supplied in the course of this correspondence. A final grant, recognition, or title is not asserted by this study; the matter is described as an ongoing institutional process.

The author also commenced a Simplificada heraldic certification process with the Cronista de Armas de Castilla y León. A payment of EUR 400 was made on 30 October 2026. The certification was still pending as of the date of this article, and supplementary genealogical material was provided for inclusion in the existing case. Neither the certificate nor its proposed wording is represented as already issued. Correspondence with Registro Araldico Italiano (RAI) about armorial and genealogical registration is likewise distinct from a completed registration; submission of supporting materials does not itself constitute a confirmed entry in that register.

Future grants or recognitions, if awarded, would be separate transactions from the already completed Armorial Register entry. The present article therefore distinguishes: (1) the existing private armorial registration, (2) an application or inquiry concerning armorial certification, (3) correspondence involving possible heraldic recognition, and (4) an additional registration request. Each institution determines its own documentary and heraldic procedures.

12. Author’s professional background and research role

Doğukan Yegin is the CEO of NorthByte Norway Tec Ltd. in London (from April 2026), and an Associate Founder of Autism Advocacy Platform Sweden (from January 2026), as recorded in the LinkedIn profile supplied for this article. The profile describes work in open-source intelligence, information technology, software and web development, service-desk support, and security-related technical operations. It also lists current technical support and security work at Kuzey Marmara Otoyolu İşletmesi (KMO), commencing in 2025, following software and web development work there from November 2022 to February 2025.

Earlier experience listed in the same profile includes general management at CosmosWeb Web Hosting Ltd. (2022–2024), editorial work for Farkındalık Haber (2024), content editing on YouTube (2024–2026), logistics at Yemeksepeti (2021–2022), Mng Esmaş (2020–2021), and Şok Marketler (2018–2020). The supplied educational record lists MEB Open Education High School and Mahmut Şevket Paşa primary education in Şişli, as well as professional certifications including Python Data Structures and computer programming training.

The CV is used here solely to identify the author's professional and archival background; the LinkedIn profile is an author-supplied professional source rather than independent verification of every employment entry. Private phone numbers, e-mail addresses and unrelated personal identifiers have been omitted from this public paper. This genealogical study is authored in an independent research capacity and is not attributed as an official publication of the author's employer or any heraldic institution.

13. Findings and conclusion

The research establishes a set of mutually relevant records: a named Yegin branch in the printed GÜLİNO (10) chart; recent father–son relationships in the Turkish civil ancestry extract; a reported 1925 fire-related local re-registration in an archival reply; and oral testimony regarding Hasan and İbrahim Yeğin. These are not interchangeable records. Their value lies in the fact that each can be located, described and compared at its proper evidentiary level.

The printed pedigree, civil records, and family testimony provide strong and identifiable documentary grounds for examining the House of Yegin's historical association with the Kureyşan Ocak. The central contribution of the paper is an auditable source map that makes the family branch visible without inventing undocumented conversations, records or events. The source photographs and restricted official extracts included here make the analysis easier to inspect. Future access to the full printed volume or an image of the signed archival reply could enrich the record; the existing documents retain their value in the meantime.

Appendix. Supplementary reconstructed family chart

Figure 9 is a modern explanatory image prepared from the three categories of information discussed above: the printed pedigree, the civil sequence, and family testimony. Its three panels are deliberately separated because their source types differ. The right-hand panel contains contemporary family details supplied by the author; it is not a civil extract. Its labels remain in Turkish as in the originally prepared figure.

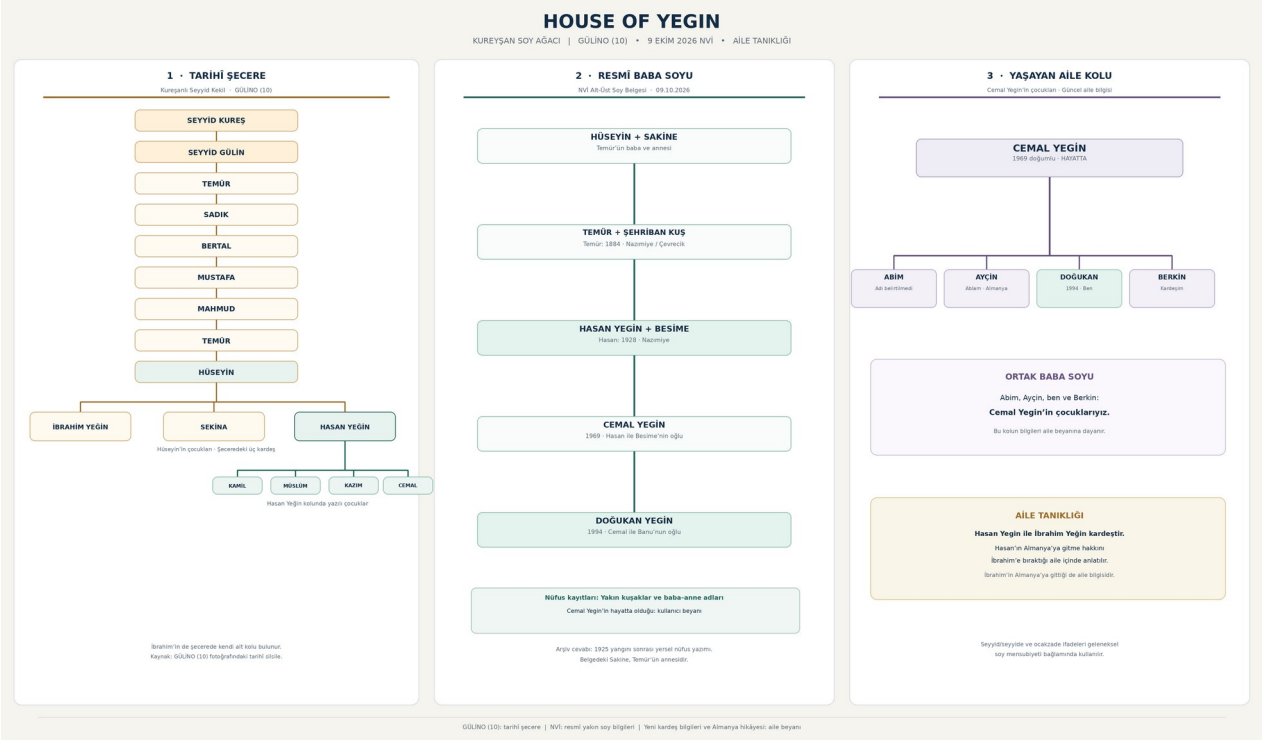

Figure 9. House of Yegin reconstructed chart (4 November 2026). Contemporary explanatory illustration with historical, administrative and oral-history source panels. Not an official verification instrument.

Publication and source note

Independent English-language study prepared for Academia.edu. The front-matter portrait, registered coat of arms, armorial certificate, and register screenshot are supplied by the author, and are reproduced for identification of the armiger and the extant private registration. Their inclusion does not transform the source pedigree into a sovereign title or independently certified remote descent. Historical source figures reproduce photographed excerpts of Kekil's printed genealogy for academic discussion and are credited accordingly. Selected civil registry images exclude unrelated personal records and registry numbers. The 1925 archival reply appears as a transcription provided by the applicant, not a scanned official original. The LinkedIn profile serves as an author-supplied CV source. Registration, correspondence, and pending certification are reported separately.
